Jonathan,

I know that the water in Tank 12 was originally in Tank 13 until you guys transferred to Tank 12. Is there any remaining material in Tank 13?

Thanks
Gary Moore

It is my understanding that Tank 12 is just (treated) water. I will confirm.

Jonathan,

Has a water and oil cut been made to determine the amount of oil and water?

Thanks

Gary:

It is my understanding that there was ~22,000 barrels of (treated) water in Tank 12. I will send someone down to confirm prior to Brian's arrival next week.

I will also check with our consultant and TCEQ with regards to the Irrigation water release permit.

Regards,

Jonathan/Scott,

The following items is one the of currently one of the 4 items you guys have left to complete before the removal action is satisfied (unless I need to add more items):

Tank 12 (Material moved from T13): Treat/Dispose of oily water and remove/dispose of any accumulated

tank bottoms;

Refinery Piping/Equipment

I need to know how much material remains In Tank 12. I also need to know the status of your work to get a permit from TCEQ for irrigation purposes for this water or if it will be disposed.

I need this information today.

Thanks
